

User Documentation

In this application when it is clicked it will turn on and open a welcome window of the game. After that the user have to put his or her name, after putting the name a game display will come up with game menu. In the game menu there will be many options like instructions, play, high score and level with easy medium and hard, there will be other options like sound on or off settings as well if the player don't want to play he or she can quit the game.

Now the game instructions, here the player will know how to control the helicopter. User can use keyboard arrow up and down to control the helicopter.

Up will increase helicopter height and down will decrease helicopter height.

When the user will play, the user can choose level before playing, after choosing the level user will start the game.

While playing user score will be recorded automatically and will be showed later after user finishes the game. Game score of all the previous game played will be recorded so that the user can see the achievement user high scored.
